EXECUTIVE SUMMARY

To be read in conjunction with full report

Site	- Mitcheldean immediately to the south with housing to the south west and an industrial estate to the south east. - Site comprises an open field flanked by Ross Road and Carisbrook Road. - Ditch to south boundary culverted under the road and continues south east being culverted through the industrial estate. - Site slopes steeply from a midpoint along the northern boundary towards the south west, south and south east. - No visual or olfactory evidence of contamination.
Historical Maps	- Date back to 1881. - At that time site comprised three fields to the north of the village of Mitcheldean with otherwise open farmland and large areas of woodland, particularly to the west, extending in all directions. - Pond areas known as Carisbrook Pools located at south boundary no longer recorded by 1970. - Old quarry 0.5km to the east no longer recorded by 1903. - In 1903 Brickworks and Portland Cement Works appear about 1km to the south west and south east respectively but have become disused by the 1920s and the 1950s respectively. - Gas works in Mitcheldean no longer recorded by the 1950s. - Ironstone pits and numerous extraction activities recorded within Wigpool Common to the west but substantially disused or have disappeared by the 1970s. - By c.1970 residential development within Mitcheldean extending north up to the site and completed to its current extent by 1977. - By then also works buildings appear to the east with development complete to its current extent by 1994.
Geology and Hydrogeology	- Mapping indicates that the site is immediately underlain by sandstones likely to be weathered at surface. - Bedrock Aquifer designation is given as Secondary Aquifer. - Site is not located within a Source Protection Zone.
Hydrology and Flooding	- Watercourse immediately to the south east culverted through the business park and appears as open watercourse 0.5km from the site. - Site located in an area of EA Flood Zone 1 and over 1km from the nearest areas of Zone 2 and Zone 3 Flood Risk. - Surface water flooding recorded sporadically in the area more concentrated to the south with a localised area within the south corner of the site. - Reference should be made to the separate Flood Risk Assessment.
Mining and Extraction	- Site not located in an area which is affected by coal mining. - Other than potentially the small pond areas no surface extraction activities identified in the area immediately surrounding the site, with the nearest mapped historic activities at least 0.5km from the site. - BGS recorded mineral site 250m to the west but no features identified on historic mapping and area now developed with housing.

Waste and Landfill Sites	- No recorded landfill sites within 1km with a licenced waste management facility some 400m to the south east within the business park but no longer in operation.
Contaminated Land Issues	- Other than fill to the pond areas no potential issues identified relating to the site.
Hazardous Ground Gas	- Site not affected by radon and no measures required. - No recorded external sources of risk identified but backfill to former pond areas may potentially present a source of localised risk.
Previous Investigation Data	- No relevant information identified.
Site Investigation	- General ground conditions to be investigated for geotechnical and environmental purposes. - Steep topography likely to have an impact on foundation requirements. - Potential sources of contamination and gas risk associated with former pond areas to be investigated.
Ground Infiltration Drainage	- Subject to extent of weathering, ground conditions may present some suitability for infiltration based drainage but if so to be viewed with caution given the steep topography.
Invasive Plants	- Needs to be subject to a specialist assessment.

1.0 **INTRODUCTION**

1.1 **Appointment**

In October 2018, Lees Roxburgh Limited were first commissioned by Gladman Developments to carry out a Phase 1 Geoenvironmental Assessment on an area of land off Carisbrook Road, Mitcheldean, Gloucestershire. In June 2025 Lees Roxburgh were commissioned to refresh the assessment based on updated sources of information.

The Geoenvironmental Assessment covers a Phase 1 Desk Study based on responses from these sources and the original site visit in November 2016.

1.2 **Proposed Development**

1.2.1 A residential housing development is proposed.

1.3 **Objectives**

1.3.1 The objectives of the Phase 1 Geoenvironmental Assessment of the site are summarised as follows;

- Determine the historical and environmental setting of the site.
- Determine the geology, hydrogeology and hydrology of the area of the site.
- Advise on anticipated ground conditions.
- Identify potential environmental hazards to the development.
- Prepare a preliminary risk assessment where potential hazards to the development have been identified.
- Set out proposals for physical site investigation works (Phase 2 Geoenvironmental Assessment).

1.4 **Scope of Work**

1.4.1 The Phase 1 Desk Study element of the work has been based on the original site walkover and reference to, and must be read in conjunction with, the following;

- Landmark Envirocheck Report – **Appendix 2A**
- Coal Authority
- Forest of Dean District Council – **Appendix 2B**

1.4.2 This report describes the findings of the assessment work and provides recommendations in respect of site investigation works.

- 1.4.3 Lees Roxburgh Limited, having exercised reasonable skill, care and diligence in preparing this report, shall not be held liable for any loss arising from erroneous information received from third parties.
- 1.4.4 This report has been prepared specifically for Gladman Developments and their advisors and reliance on its contents cannot be placed by any third party without the express permission of Lees Roxburgh.

2.0 **SITE LOCATION AND DESCRIPTION**

2.1 **Location**

- 2.1.1 The site is centred on National Grid references 366420, 219350 and is 9.72ha in total area (**Appendix 1**).
- 2.1.2 The site is situated at the north of the settlement boundary of Mitcheldean, which is some 17km to the west of Gloucester.

2.2 **Surrounding Land Use and Access**

- 2.2.1 Mitcheldean lies to the south west and south of the site with a large industrial estate known as Vantage Point to the south east.
- 2.2.2 To the north west, north and north east of the site there is extensive open farmland, with a substantial woodland area around Wigpool located 1km to the west.
- 2.2.3 Access onto the site is via two farm gates located on the eastern boundary with Bradley Court Road.
- 2.2.4 Ross Road and Carisbrook Road form the west and south west site boundaries.

2.3 **Site Description**

- 2.3.1 The site is approximately a heart shape and comprises a single large field that is currently set to arable use and appears well drained.
- 2.3.2 The field boundaries are formed by hedges, reinforced with post and wire fencing throughout.
- 2.3.3 There are two trees located close to the southern corner of the site.
- Trees also line some sections of the west, south west and eastern boundaries.
- 2.3.4 No visual or olfactory evidence of contamination was noted.

2.4 **Topography**

- 2.4.1 The site falls from a high point about midway along the north boundary towards the west, south and east.
- 2.4.2 Reference should be made to the topographical survey, but boundary levels can be summarised as follows;

- | | |
|--------------------------------|------------|
| • High point north boundary... | 160.0m AOD |
| • North west corner... | 151.5m AOD |
| • North east corner... | 154.5m AOD |
| • Southern tip... | 137.0m AOD |

There is therefore an average fall of about 1 in 15 from the high point to the low southern corner although the southern slopes steepen to in excess of 1 in 10.

- 2.4.3 OS contours reflect the topography continuing to fall in a south easterly direction.

2.5 Existing Drainage

- 2.5.1 Watercourse systems in the area are identified on the OS Mapping in **Appendix 1A** which identifies a short section of ditch adjacent to the site and an open watercourse appearing some 500m to the south east.

- 2.5.2 There are no drainage ditches within the site.

- 2.5.3 There is an active drainage ditch located within the verge along the south west boundary with Carisbrook Road. The ditch commences with a large diameter pipe with flow entering from the north west.

The open ditch extends for some 110m and then enters a large diameter culvert (approx. 825mm) as it approaches the junction of Carisbrook Road and Bradley Court Road. There is a manhole located close to the road junction with a depth to invert of 3.3m.

The drainage ditch reappears on the opposite side of Bradley Court Road before entering culvert to the south east within the Vantage Point industrial estate. It is reasonable to conclude this continues south east before opening out into the system identified on OS mapping.

- 2.5.4 There is a sewage pumping station located to the west of the site on the opposite of Ross Road. This is reflected on Severn Trent sewer records.

3.0 HISTORICAL, GEOLOGICAL AND ENVIRONMENTAL SETTING

3.1 Sources of Information

- 3.1.1 Reference has been made to the Landmark Envirocheck report dated 24th July 2024 (**Appendix 2A**).
- 3.1.2 Reference has also been made to the Coal Authority and the Forest of Dean District Council (**Appendix 2B**).

3.2 Historical Maps

- 3.2.1 The Envirocheck report provides mapping dating back to 1881.
- 3.2.2

Map Dates	Surrounding Area	Site
1881 to 1905	Within an area of open farmland with extensive woodland to the west, <i>Lining Wood</i> and <i>Mitcheldeanmeend Inclosure No. 1</i> to the south west. <i>Wigpool Common</i> beyond <i>Lining Wood</i> within which are three extensive pond areas. References to <i>Air Shaft</i>, <i>Old Quarry</i>, <i>Wigpool Pit No.1 (Ironstone)</i>, <i>Wigpool Pit No. 2 (Ironstone)</i>, <i>Old Shaft</i>, <i>Shaft</i>, and <i>Rifle Range</i> in the area of the common and the wood. Open farmland extends north, east and south east with sporadic, but large, woodland areas. Village of <i>Mitcheldean</i> close by to the south. <i>Gas Works</i> and <i>Brewery</i> within the village. <i>Old Quarry</i> 550m to the east. <i>Breakheart Hill</i> referenced 630m to the east. Many references to <i>Old Quarry</i> and <i>Old Shaft</i> generally in the area. By 1903 refence to <i>Old Quarry</i> to the east has disappeared. <i>Wilderness Quarries</i> and <i>Wilderness Brick Works</i> now appear about 1km to the south east. <i>Wilderness Portland Cement Works</i> appears 800m to the south west.	Comprises three open fields with the east boundary formed by <i>Roman Road (Site of)</i>, the west boundary following the line but not abutting a lane and the southern boundary approximately correlating with field boundaries. The north boundary better correlates with field boundaries. Pond area, <i>Carisbrook Pools</i>, comprising two features straddles the southern tip of the site with what appears to be a watercourse meandering east. Also reference to <i>Spring</i> along the field boundary to the west.
1923 to 1924	<i>Wilderness Quarries</i> and <i>Wilderness Brick Works</i> now (<i>Disused</i>). Iron pits to the west also (<i>Disused</i>). Extensive quarry workings to the south west associated with the Cement Works.	Pond area merged into a single feature. What appear to be two small ponds appear on the southern site boundary. Otherwise unchanged.

1953 to 1955 (1:10,000 only)	Wilderness Portland Cement Works (<i>Disused</i>) but with quarry areas now remaining. Numerous features including the area of the iron pits remain within Wigpool Common. Sporadic further development within Mitcheldean although no longer reference to gas works. Lane to west is now <i>B4224</i> but that to east no longer annotated.	Appears unchanged.
1961 to 1970 (1:2,500 only)	Development within Mitcheldean has extended up to opposite the south boundary of the site which is now delineated by a road link between the road to the west and that to the east named <i>Bradley Court Road</i>. Residential development ongoing immediately to the south west with <i>Engineering Works</i> immediately to the south east over the line of the watercourse previously identified.	West and south west boundaries now clearly correlate to the road corridor leaving only a short section of south east boundary not appearing defined by physical features. No internal boundaries now recorded. The pools and pond areas along the south boundary have also disappeared.
1972 to 1977	No longer reference to Iron Pits to the west with only occasional references to former shafts. Development within Mitcheldean now extending north to the west comprising residential development and north to the east comprising a significant engineering works. Now <i>Ross Road</i> to the west and links to <i>Bradley Court Road</i> via <i>Carisbrook Road</i>.	Remaining short section of south east boundary now appears to correlate with road corridor. Otherwise clear of features.
1988 to 1994	By 1994 additional building appears to the east at northern limit to the works but otherwise the immediate area appears unchanged.	Unchanged.
2000 to 2024	More clearly identifies detail including ditch and watercourse systems including one which appears 500m to the south east beyond the works buildings being that identified on earlier mapping as a continuation of the system which served the former pools. <i>Reservoir</i> immediately beyond the works to the east. Extensive area to the south east and south now described as <i>Business Park</i>. The extent of development within Mitcheldean now clearly identified. Large <i>Water Works</i> 1km to the south west. Refer to Section 2.0.	Clear of features. Aerial photograph identifies a single field with two trees to the southern boundary, a few to the northern boundary and a larger grouping along the west boundary. Refer to Section 2.0.

3.3 Site Geology and Hydrogeology

- 3.3.1 Reference to geological mapping identifies the site as being free of superficial deposits and immediately underlain by sandstones of the Brownstones Formation, likely to be weathered at surface.
- 3.3.2 Soils are classified as of High Leaching Potential.
- 3.3.3 Bedrock Aquifer designation is given as Secondary Aquifer-A.
- 3.3.4 The site is not located within a Source Protection Zone.

3.4 Estimated Soil Chemistry

- 3.4.1 Estimated background concentrations for the following metals have been provided;
- Arsenic < 15mg/kg
 - Cadmium < 1.8mg/kg
 - Chromium 120-180mg/kg
 - Lead < 100mg/kg
 - Nickel 15-30mg/kg
- 3.4.2 These background levels are not considered as presenting a source of risk to the development.

3.5 Hydrology and Flooding

- 3.5.1 OS contours indicate that the northern boundary of the site is to all intents and purposes at the top of a sub catchment with site levels substantially falling to the south and south east to the watercourse system identified on mapping and confirmed on site associated with the historic pools.

This system appears 500m to the south east where it meets a system entering from the west which appears substantially culverted through Mitcheldean.

- 3.5.2 Reference to flood mapping identified as the site as being located within a Zone 1 area of flood risk with no areas of map Zone 2/Zone 3 flood risk identified within at least 1km.
- 3.5.3 Surface water flooding is identified very sporadically to the west, north and east becoming more concentrated to the south with a localised area within the southern corner of the site.

3.6 Pollution Incidents to Controlled Waters

- 3.6.1 There are no recorded pollution incidents within 250m of the site.

3.7 Mining and Extraction

3.7.1 The site is not located in an area which is affected by coal mining.

3.7.2 Reference to historical mapping has not identified any surface extraction activities on or within the immediate area of the site with the nearest historic OS mapped features being the isolated quarry to the east and the extensive activities to the west, all over 500m from the site.

There is a BGS recorded mineral site 250m to the west but this does not correlate with any evident mapped historical feature and the area of which is now developed.

3.8 Waste and Landfill Sites

3.8.1 There are no recorded landfill sites within 1km of the site although a licensed waste management facility some 400m to the east is located to Vantage Point Business Park and surrendered in June 2018

3.9 Contaminated Land Issues

3.9.1 Other than fill material to the former pools, the Forest of Dean District Council have identified no potential issues affecting the site.

3.10 Contemporary Trade Directory and Fuel Station Entries

3.10.1 There are 2 No. Contemporary Trade Directory Entries within 250m of the site both located to Building 3 at Vantage Point Business Village, one being Commercial Cleaning Services (Active) and the second being Food Products – Manufacturers (Inactive).

Neither are considered relevant to development of this site.

3.10.2 There are no Fuel Station entries within 0.5km of the site.

3.11 Hazardous Ground Gas

3.11.1 No recorded waste or landfill activities have been identified which present a gas risk to the development.

3.11.2 Reference to *BRE Radon – Guidance on Protective Measures for New Buildings* confirms that the site is not at risk from radon and radon protection measures are therefore not required.

3.11.3 The backfilled pond areas to the southern boundary may present a minor source of risk.

3.11.4 On this basis, the risk to the development relating to landfill gas from external sources and radon can be discounted but that associated with filling to the water features needs to be considered.

3.12 Previous Investigation Data

3.12.1 No relevant data has been identified.

4.0 PRELIMINARY RISK ASSESSMENT

4.1 Potential Sources of Contamination

- 4.1.1 From a review of the Desk Study stage of the work the only source of environmental risk identified is associated with the backfilled water features to the southern boundary.

Sections 4.1, 4.2 and 4.3 set out the general potential issues which can impact on a site of this nature. Section 4.4 addresses this specific site.

- 4.1.2 Any potential contaminants are likely to be entrained within the made ground and could potentially relate to the following determinands;

- Elements which could pose a risk to human health and/or controlled water - arsenic, cadmium, chromium VI, lead, mercury, nickel, nitrogen, selenium.
- Potentially phytotoxic elements - copper, zinc.
- Inorganic chemicals which could pose a risk to human health controlled water and/or buildings - cyanide, soluble nitrate, sulphate, sulphur.
- Other inorganic contamination - asbestos, pH conditions.
- Organic contaminants, which could pose a risk to human health and/or controlled water - polyaromatic hydrocarbons (PAH) and total petroleum hydrocarbons (TPH), polychlorinated biphenols (PCB), solvents/ SVOCs.

4.2 Potential Receptors

- 4.2.1 There are a number of receptors that could be affected by potential onsite sources of contamination, associated with development of a site. These are;

- Groundwater
- Surface Water
- Development workers exposed during groundworks
- Adjacent site users during development works, possibly exposed to soil particles
- Future end users exposed to soil in garden/landscaped areas
- Plants exposed to phytotoxic substances in soil or groundwater
- Buildings exposed to aggressive ground conditions.

4.3 Potential Pathways

- 4.3.1 The risk assessment adopted is based on the Source-Pathway-Receptor (SPR) approach where the Source comprises the potential contaminant, the Receptor is a target which may be adversely affected by the Source and the Pathway, the means by which the contaminant may move from the Source to the Receptor.
- 4.3.2 There are a number of potential pathways for sources of contamination to reach sensitive receptors, including direct contact with the soil, air-borne vapours, dust and groundwater.

Contaminants in the soil may also generate leachate, which could potentially reach the aquifer and/or surface water bodies.

4.4 Pollutant Linkages

- 4.4.1 The following table, which represents a site-specific Conceptual Environmental Risk Model (CERM), provides a summary of potential pollution linkages and risks that could be associated with the site, in relation to the proposed residential development.

Source	Pathway	Receptor	Potential Pollution Linkage	Comment
Made Ground: Contaminants Entrained within soil at the site (e.g. toxic/ phytotoxic elements, Extreme pH Conditions hydrocarbons), PCB, SVOC etc.	Skin contact/ ingestion/ inhalation	Construction workers	Potentially Active - Low Risk	Potential source identified at this stage associated with backfilled ponds.
	Skin contact/ ingestion/ inhalation	Site end users	Potentially Active - Low Risk	Potential source identified at this stage associated with backfilled ponds.
	Ingestion/ inhalation	Adjacent land users	Potentially Active - Low Risk	Potential source identified at this stage associated with backfilled ponds.
	Direct contact /dissolved	Structure.	Potentially Active - Low Risk	Potential source identified at this stage associated with backfilled ponds.
	Roots within contaminated soils	Plant growth	Potentially Active - Low Risk	No evidence of poor plant growth was observed during the site inspection.
Mobile Contaminants (i.e. leachates, hydrocarbons) within the ground	Leaching into groundwater	Groundwater	Potentially Active - Low Risk	Underlain by a Secondary Aquifer. Potential source identified at this stage associated with backfilled ponds.
	As above; with flow through permeable soils	Abstractions	Inactive	The site is not within a Source Protection Zone.
	Migration through Soil	Surface water	Potentially Active - Low Risk	Potential source identified at this stage associated with backfilled ponds.

Landfill Gas	Emission From the ground	Construction workers	Inactive	No potential external sources identified.
	As above penetrating buildings	Site end users	Inactive	
Radon	Emissions from the ground	Construction workers	Inactive	The site is not within a radon risk area.
	As above; Penetrating buildings	Site end users		
Hazardous Ground Gasses; originating from organic degradable soils or volatile hydrocarbons	Emission From the ground	Construction workers	Potentially Active - Low Risk	Potential source identified at this stage associated with backfilled ponds.
	As above; penetrating unprotected buildings	Site end users	Potentially Active - Low Risk	

4.4.2 In summary, it is considered from review of the source material and the existing setting of the site that any risk of contamination can be considered to be low and the property would not be considered to be designated as “contaminated land” under Part IIA of the Environmental Protection Act 1990. However, physical site investigation works are recommended and covered under Section 5.0.

5.0 COMMENT AND RECOMMENDATIONS

5.1 Site Investigation

5.1.1 A Phase 2 Geoenvironmental Assessment (Site Investigation) will be required at the appropriate stage.

5.1.2 Whilst a trial pit investigation as a first stage can represent the best means of identifying trench stability for construction purposes, it is envisaged that the steep topography on this site will dictate the requirement for cutting into and filling above the existing ground slopes. On this basis, the scope and nature of any investigation work prior to reprofiling site levels will need to be assessed in the context of the proposed development levels.

It is therefore envisaged that the most appropriate primary form of investigation will comprise boreholes the depth of which will need to be based on at least an initial assessment of proposed development levels, and supplemented by trial pits and further boreholes as deemed necessary.

5.1.3 The scope for borehole investigation work should address the potential gas risk associated with fill to the former pond areas.

5.2 Potential Foundation Requirements and Contamination Issues

5.2.1 Detailed foundation requirements can only be confirmed once physical site investigation works have been undertaken. In this regard however it is anticipated that the steep topography will have foundation implications.

5.2.2 The only potential sources of risk identified to date relate to filling to the former pond areas along the south boundary and are therefore considered relatively low and localised.

The presence or otherwise of any risks and potential implications on the development can only be confirmed once physical site investigation works have been undertaken and ground conditions sampled and assessed, supplemented by testing as necessary.

5.3 Ground Infiltration Drainage

5.3.1 On the basis of this desk study, it is considered that subject to the extent of weathering of the underlying sandstone ground conditions may provide some suitability for surface water infiltration. However, as for the investigation works described under 5.1, any infiltration testing deemed appropriate will need to pay due regard to the proposed development levels.

Notwithstanding and subject to suitability any proposals for the introduction of infiltration techniques within the main body of the site should be considered with caution given the steep topography.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice

Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment

A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant

A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Envirocheck reports are compiled from 136 different sources of data.

LANDMARK INFORMATION GROUP®

Gloucestershire

Published 1883

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 2000

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2024

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Ordnance Survey Plan

Published 1969

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1974

Source map scale - 1:2,500

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1994

Source map scale - 1:2,500

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

LANDMARK INFORMATION GROUP®

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

LANDMARK INFORMATION GROUP®

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

● LANDMARK INFORMATION GROUP®

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Report Section and Details	Page Number
Summary	-
The Summary section provides an overview of the data contained within the report, detailing the number of data set features or the existence of a data set in relation to the buffer selected. For ease of reference, the report is broken down into 4 sections of data; Mining and Natural Cavities Data, Historical Land Use Information (1:2,500), Historical Land Use Information (1:10,000) and Ground Stability Data (1:50,000).	
Mining and Natural Cavities Data	1
The Mining and Natural Cavities Data section features data sets related to the existence of mining areas and their potential hazards; and details of naturally formed cavities. Data sets within this section are not plotted, with the exception of BGS Recorded Mineral Sites and Potential Mining Areas which feature on the Historical Land Use Information (1:10,000) map.	
Historical Land Use Information (1:2,500)	-
The Historical Land Use Information (1:2,500) section contains data captured from analysis carried out by Landmark of 1:1,250 and 1:2,500 scale historical Ordnance Survey mapping, identifying areas where, historically, the land uses were potentially contaminative. For the purpose of this Envirocheck module, only historical data relating to mining and ground stability has been included and plotted on the corresponding Historical Land Use Information (1:2,500) map. This section also includes the Subterranean Features data set, which details various man-made and man-used underground spaces obtained from the Subterranea Britannica society.	
Historical Land Use Information (1:10,000)	6
The Historical Land Use (1:10,000) section covers data captured from the systematic analysis carried out by Landmark of 1:10, 560 and 1:10,000 scale historical Ordnance Survey mapping dating back to the mid-19th century, identifying potentially contaminative past industrial land uses. For the purpose of this Envirocheck module, only data relating to mining and ground stability has been included and plotted on the accompanying Historical Land Use Information (1:10,000) map.	
Ground Stability Data (1:50,000)	9
The Ground Stability (1:50,000) section includes the BGS Geosure data suite, reporting features to 250m and plotted onto 3 separate maps. Also reported is brine subsidence, brine mining and salt mining data sets, of which Brine Pumping and Salt Mining Related Features are plotted, and subsidence insurance claims and insurance investigations data, which is not plotted.	
Historical Map List	10
The Historical Map List section details the historical mapping that has been analysed for your site, in relation to the Historical Land Use Information sections.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Dear Karen

ENVIRONMENTAL INFORMATION REGULATIONS 2004
Re: Carisbrook Road, Mitcheldean

With regards to your recent Environmental Information Regulations Request, reference F/25/00991/EHEIR, please see the following response:

1. Known pollution incidents which may have affected the site.

Our records do not include any incidents that may have polluted the site.

2. Contaminative activities at the site.

Historical maps suggest that there are areas of infilled material along the southern boundary of the site, although we have no further information pertaining to these. The infilled areas are associated with former surface water features including a stream and a pool.

3. Pre-licensing or unlicensed landfilling activities within a 500m radius of the site, including landfill location, depth, presence of lining system, age and type of waste deposits.

Our records do not include any records of landfilling activities apart from the small, infilled areas previously mentioned

4. Results of any landfill gas and leachate monitoring.

We have no records of any landfill gas or leachate monitoring at the site.

If you are unhappy with the service you have received in relation to your request and wish to make a complaint you should write to The Monitoring Officer, Forest of Dean District Council, High Street, Coleford, GL16 8HG.

If you are not content with the outcome of your complaint, you may apply directly to the Information Commissioner (ICO) for a decision. Generally, the ICO cannot make a decision unless you have exhausted the complaints procedure provided by the Council. The ICO can be contacted at: The Information Commissioner's Office, Wycliffe House, Water Lane, Wilmslow, Cheshire SK9 5AF.

Yours sincerely,

Karen Toomer
